- Technical / Developer Documentation
- Design / UI
- UX / DX
- Shoelace
- Tailwind
- Git
- PHP
- jQuery
- Bootstrap

PROFILE

Passionate web developer crafting intuitive & beautiful user experiences. Proven proficiency in bringing designs to life within deadlines.

EXPERIENCE

Full Stack Developer, SDE-I, BoxedUp, Remote — Mar 2024 - Present

Fast-paced startup with a small, hungry team wearing multiple hats

- Hired to expand the full-stack team and develop a new sales feature on a Rails-powered RMS & e-commerce platform built primarily for rental services.
- End-to-end feature ownership—translating Word-doc requirements into technical specs, prototyping UIs in Figma, building backend models, integrating responsive frontends, and writing automated tests
- Own production health—monitoring servers, triaging bugs or outages, and serving on-call rotations for swift incident response

Software Engineer, Clickfunnels, Remote — Apr 2018 - Feb 2024

A primary UI developer for Clickfunnels over the past six years

- Migrated a legacy Bootstrap/inline-style front end into a documented Semantic UI framework and then rebuilt the monolithic Rails app with Turbo, Stimulus, Tailwind, and Bullet Train—building reusable components and dev docs for a consistent multi-dev workflow
- Leveraged company-sponsored Rails training to evolve from UI specialist into full-stack engineer, cutting context switches and independently owning front- and back-end features .

Front End and Interactive Developer (contracts)

PrizeLogic and Lavidge, Phoenix, AZ — Aug 2017 – Apr 2018

- Modernized sweepstakes platforms by moving from separate mobile and desktop builds to a unified responsive design and automated HTML-email generation via a Gulp pipeline
- Delivered custom UIs in Umbraco CMS under tight time constraints—extending an initial two-week engagement into a four-month project and streamlining template creation

Front-End Developer, Sagepath, Atlanta, GA — Feb 2015 - Aug 2017

Hired as a junior developer, quickly exposed to a number of technologies, and rose through the ranks in my short but formative years here.

- Originally tasked with weekly website updates, automated much of the process (Photoshop presets, html templates) saving countless hours in dev work.
- Approached by a local charity, built a WordPress website with lightly customized theme on a pro-bono basis.
- Led front-end development of a CMS-driven website (Umbraco, ASP.NET) for a government agency. This public-facing platform educated users about historical events and promotes core values like courage, sacrifice, & integrity.

EDUCATION

University of Central Florida, Bachelors — Digital Media & Design, 2014

Valencia College, Associates — Art & Science, 2012
